NON-SELECTIVE CONTACT KILLER FOR CONTROL OF WEEDS AND GRASSES

SOCKS IT TO 'EM

DESCRIPTION

A unique blend of chemical killing ingredients that will actually replace hand picking of weeds. This herbicide is a chemical contact killer that kills most forms of green plants. It can be used to remove unwanted weeds and grasses growing in ornamental beds, among evergreens, hedges, shrubs and around trees, fences and buildings without injury to desirable woody plants or to the soil.

DO 8 HOURS WORK IN 15 MINUTES

15 minutes of spraying saves 8 hours of laborious hand picking of weeds.

HOW DOES IT WORK?

This product eliminates the back-breaking job of hand picking of weeds and grasses without injury to desirable woody plants. It becomes inactive on contact with soil.

1. Contact Killer — kills by absorption through the leaves only.
2. Non-selective Killer — kills both monocots (grasses) and dicots (broadleaf weeds)—it kills most green plants.
3. Visible kill will be seen within 12 to 56 hours.
4. Non injurious to woody barked plants even if sprayed on the stems, trunks or roots of these desirable woody plants.
5. Becomes inactive on contact with the soil, therefore is non-toxic to desirable plants through root absorption—does not sterilize the soil.

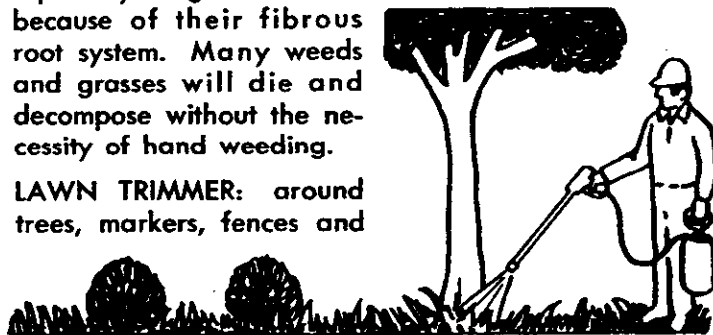

6. Deactivation goes into effect when the material comes in contact with the soil. It starts decomposition and chemical breakdown quickly, so that it will not run off or leach in the soil or leave any residual to cause any future pollution problems.

WHERE TO USE!

IN SHRUBBERY AREAS: eliminates hand weeding in shrubs, evergreens, hedges and ornamental beds. Quickly and easily controls grasses that are especially tough to remove because of their fibrous root system. Many weeds and grasses will die and decompose without the necessity of hand weeding.

LAWN TRIMMER: around trees, markers, fences and
